

AEST Partners with V-Chain Solutions to Gain Supply Chain Visibility

San Francisco, California – Nov. 20, 2008 – Alternative Energy Sources Technology (AEST) today announced that it has chosen to partner with V-Chain Solutions, Inc to establish a global supply chain visibility solution, the V-Chain Network. V-Chain will provide consulting and services in addition to working with AEST to build out the V-Chain Network for the energy sector.

AEST is an alternative energy technology developer and energy services company providing sustainable solutions that help remove pollutants ("green house gases" or GHG) from the environment. Their mission is to empower their customers with alternative power generation and creative, renewable energy conservation solutions and resources that help them adhere to their social responsibility to protect our planet as good corporate citizens should. Simply stated, AEST helps to lower energy demand and operating costs, saving money, and in the process elevating their customer's visibility as responsible citizens helping to sustain the planet.

V-Chain Solutions will work with AEST to offer companies a way to "go green" through energy savings and supply chain efficiencies. In addition to the company's work directly with AEST, there are ample opportunities for the V-Chain Network to grow virally. This is due to the mandate by AEST that, by the year 2011, some 90% of their suppliers must use the V-Chain Network.

"We are excited to work with V-Chain Solutions, the leader in supply chain visibility solutions," stated Terry Kenney, CEO of AEST. "With their deep knowledge of the supply chain, coupled with their unique approach of providing total visibility into all aspects of the supply chain, V-Chain is positioned to not only help us achieve efficiencies, but also to help our suppliers to do so as well."

About V-Chain Solutions, Inc.

V-Chain Solutions is dedicated to increasing business value by aligning people, process, and technologies. V-Chain places value on integrity, innovation and accountability to customers, partners and shareholders. We provide the means to assess and manage improvement projects that deliver a significant return on investment to our clients. V-Chain's vision is to create a Supply Chain Visibility Network in which companies are guaranteed efficiency through the use of visualization, collaboration and system consolidation.

V-Chain has a world class think-tank service which consists of scientists, universities, research firms, and top supply chain experts. V-Chain Solutions is the first emerging technology company to become a lab partner with Texas A&M University. We join with other lab partners such as IBM, Infor, Oracle, Activant and Xpress. The think tank provides our clients with the ability to model a business and run supply chain scenarios in a state-of-art Supply Chain Systems Laboratory (a one of its kind in the United States). We strive to make driving the supply chain as easy as driving a car.
